TABLE OF CONTENTS

EXECUTIVE SUMMARY

Traffic Concepts, Inc. conducted a traffic impact study for the Harford Mall redevelopment project. The development site is the existing Harford Mall that is located at 600 Bel Air Road, Bel Air Maryland. The portion of the mall to be redeveloped is along Boulton Street and east of Gateway Drive. The project developer is Castle Development Partners and the owner is Shops at Harford Mall, LLC.

Project Description & Site Access: The planned project is a 300-unit apartment building with structured garage parking. The lot will have access to Boulton Street at the existing signalized Gateway Drive intersection. Additionally, the lot will have access to Boulton Street at a new unsignalized access point that aligns with the existing right-in/right-out retail center access that is labeled intersection #8. We note, the existing mall entrance at intersection #7 will be eliminated.

Scope of Services: The study area is defined by the key intersections listed below. These intersections were analyzed during weekday AM and PM peak hours.

1. Business US 1 (Baltimore Pike) @ Tollgate Road
2. Business US 1 (Baltimore Pike) @ MD 24 (Veterans Memorial Highway)
3. MD 24 (Veterans Memorial Highway) @ Boulton Street
4. Boulton Street @ Tollgate Road
5. Boulton Street @ Gateway Drive/Mall Access
6. Boulton Street @ Athletic Club/West Mall Access[1]
7. Boulton Street @ Existing East Mall Access/Retail Center[2]
8. Boulton Street @ Proposed Future East Mall Access/Retail Center[3]
9. Tollgate Road @ West Mall Access

[1] Intersection #6 was not identified as a "key intersection" by the Town. Therefore, this intersection was not analyzed but the intersection was counted and is included in the study exhibits to create a comprehensive understanding of the existing traffic flows.

[2] The developer proposes to eliminate the existing East Mall access (Intersection #7).

[3] The developer will construct a unsignalized mall access across from the existing retail center (Intersection #8).

Analysis Methodology: The key intersections were analyzed under the Existing, Background, and Future traffic conditions, as stated in the following formula:

Total Future Traffic = (***Existing Condition*** – *current intersection turning movement volumes +* ***Background Condition*** *– 2% Growth Rate compounded over 2 years + pipeline development traffic +* ***Future Condition*** *- site generated traffic)*

All key intersections were analyzed with the Highway Capacity Manual (HCM) methodologies. Also, as required by the Town, a Synchro analysis was conducted at the key intersections, which includes HCM and the 95th percentile SimTraffic back-of-queue reports.

Site Trips: The *ITE, Trip Generation Manual 11th Edition* (Land Use Code 221 - Multi-family Housing) was used to determine the new site trips. The site trip generation, the site distribution, and the trip assignment pattern were approved by the Town.

CONCLUSION: The minimum intersection LOS threshold for developments located within the Town of Bel Air limits is a "D" level of service. With the proposed mitigation measures, all key intersections would operate at acceptable levels of service with the full build-out of the project.

INTRODUCTION

Traffic Concepts, Inc. prepared a traffic impact study for the proposed Harford Mall redevelopment project. The proposed project is a 300-unit apartment building with a parking garage. The proposed development site is shown on Exhibit 1 along with the key intersections.

Scope of Services

A scope of services document developed by the Town is included in Appendix IV. The study limits are defined by the following key intersections:

1. Business US 1 (Baltimore Pike) @ Tollgate Road
2. Business US 1 (Baltimore Pike) @ MD 24 (Veterans Memorial Highway)
3. MD 24 (Veterans Memorial Highway) @ Boulton Street
4. Boulton Street @ Tollgate Road
5. Boulton Street @ Gateway Drive/Mall Access
6. Boulton Street @ Athletic Club/West Mall Access[1]
7. Boulton Street @ Existing East Mall Access/Retail Center[2]
8. Boulton Street @ Proposed Future East Mall Access/Retail Center
9. Tollgate Road @ West Mall Access

[1] Intersection #6 was not identified as a "key intersection" by the Town. Therefore, this intersection was not analyzed but the intersection was counted and is included in the study exhibits to create a comprehensive understanding of the existing traffic flows.

[2] The developer proposes to eliminate the existing East Mall access (Intersection #7).

[3] The developer will construct a unsignalized mall access across from the existing retail center (Intersection #8).

Site Location & Site Access

The proposed apartment building will be situated along the south side of Boulton Street, east of Gateway Drive. The Harford Mall site has three existing access points along Boulton Street. As shown on the site plan, the existing access leg at the signalized Boulton Street @ East Mall Access/Retail Center intersection (Intersection #7) will be eliminated. This intersection would then become a three-way signalized intersection that will continue to serve the existing retail center. A new unsignalized access point is proposed to align with the existing right-in/right-out access at the retail center across from the mall (Intersection #8). The new access would be restricted to left-in/right-in/right-out movements.

Methodology

The study was conducted with three traffic conditions that includes analyses of the key intersection with the existing, background, and future traffic volumes. The existing condition is created with the peak hour intersection turning movement counts. This information generates the baseline intersection level of service condition. The background condition includes a 2.2 percent regional traffic growth rate and peak hour trips generated by the nearby approved, but not yet built developments. The future condition includes an adjustment of peak hour traffic flows due to the reconfigured mall access points and includes the site generated peak hour trips.

Analysis Tools

As stated in the scoping agreement, the key intersections were analyzed with Synchro software. This analysis method determined the HCM intersection levels of service and the 95th percentile back-of-queue.

EXISTING CONDITION

The existing traffic condition is created with intersection turning movement counts that were conducted at the key intersections during the weekday morning and afternoon peak hours. Each key intersection was field checked to determine the existing lane configuration. The existing lane use is shown on Exhibit 2. The existing peak one-hour traffic volumes are shown on Exhibit 3.

Road Network Description

This descriptive information is provided for the roadways and intersections that immediately surround the Harford Mall. The study roadway segments include: Business US 1 (Baltimore Pike); from Tollgate Road to MD 24, N. Tollgate; from Boulton Street to Business US 1, and Boulton Street; from Tollgate Road to MD 24.

Road Segment Descriptions

Business US 1 (Baltimore Pike) Segment

Business US 1 is functionally classified by MDOT SHA as an urban principal arterial roadway. Business US 1 is an undivided four-lane highway and has a posted speed limit of 35 mph. The study road segment has a continuous sidewalk that is approximately 5 feet in width and runs along both sides of Business US 1 from Tollgate Road to MD 24.

N. Tollgate Road Segment

The N. Tollgate Road segment begins at Business US 1 and ends at Boulton Street. Tollgate Road is a collector roadway and runs in an east to west direction. Along N. Tollgate Road, in the westbound direction, there are two travel lanes and one lane in the eastbound direction. A continuous sidewalk runs only along the north side of N. Tollgate Road.

Boulton Street Segment

Boulton Street is a collector roadway that runs in a north to south direction. Boulton Street has two northbound through travel lanes and one southbound through lane. The roadway is posted at 25 mph. There are sidewalks along both sides of Boulton Street. Traffic signals control the Boulton Street @ Gateway Drive/Harford Mall entrance intersection and the Bolton Street @ Harford Mall/commercial center access intersection.

Intersection Descriptions

Business US 1 @ Tollgate RD Intersection

The Business US 1 @ Tollgate Road intersection is controlled with a traffic signal and has video detection. A pedestrian crosswalk exists across Business US 1 on the north side of the intersection. The crosswalk has ramps and a ground mounted push button APS (Accessible Pedestrian Signal) and CPS (Countdown Pedestrian Signal) pedestrian signals. The existing pedestrian crosswalk connects the N. Tollgate Road sidewalk section to the sidewalk along S. Tollgate Road. An unsignalized and unsigned painted crosswalk exists on S. Tollgate Road at Azalea Drive.

MD 24 @ Business US 1 intersection

The MD 24 @ Business US 1 intersection is controlled with a signal with video detection. There are ground mounted pedestrian signals with push buttons APS and CPS signals on all corners of the intersection. The intersection has painted crosswalks and ramps. There is a MDOT SHA sign posted on Business US 1 noting “Stop for pedestrians at all crosswalks”.

N. Tollgate Road @ Boulton Street intersection

The traffic signal that controls the N Tollgate Road @ Boulton Street intersection has video detection on the eastbound approach. All other intersection approaches are controlled with loop detection. There are no crosswalks or pedestrian signals at this intersection.

Boulton Street @ Harford Mall/commercial center Intersection

The Bolton Street @ Harford Mall/commercial center access signal has span wire to support the signal heads. The video detection cameras are mounted on the signal poles. The signal heads including the pedestrian signal heads appear to have been recently replaced with updated equipment. There are crosswalks and pedestrian ramps on all corners of the intersection.

Boulton Street @ Gateway Drive/Harford Mall entrance

The Boulton Street @ Gateway Drive/Harford Mall entrance signal heads are supported with poles and mast arms. The signal heads are updated and the intersection is controlled with video detection. There are no pedestrian crosswalks or pedestrian equipment at this intersection.

Transit Description

The Harford Transit link Bus Route 6 (Orange Line) operates a route through Bel Air and has a stop at the Harford Mall. Additionally, the Bus Route 1 (Green Line) also provides service to Harford Mall. The mall bus stop is located on the Boulton Street side of the mall, near the Green Turtle restaurant. A bus shelter is provided at this mall stop.

Existing Traffic Volumes

BACKGROUND CONDITION

The background traffic condition evaluates the key intersections with the existing peak hour traffic and with additional traffic generated by growth rates and the stated background developments. Planned mitigation detailed on Exhibit 2 is also included at this stage.

Regional Growth Rate

The standard Harford County regional traffic growth rate of 2.2 percent was compounded over a five-year project build period to create the base (2027) traffic volumes. This information is shown on Exhibit 4.

Background Developments

Bel Air Town officials identified three (3) planned developments must be included in the study, which are shown on Exhibit 5. The Institute of Transportation Engineers' (ITE), Trip Generation Manual, 11th Edition was consulted to determine the following background trips:

	AM		PM	
	IN	**OUT**	**IN**	**OUT**
1. Upper Chesapeake Medical Campus[4]				
2. Shops at Harford Mall (aka Sears Redevelopment) ITE LUC 821- Shopping Plaza (40-150k - with Supermarket) 62.0 ksf	136	83	285	309
Less ITE PM Pass-by Trips (40%)			**- 114**	**- 124**
Net New Trips	**136**	**83**	**171**	**185**
3. Stack and Store – 25,558 SF self-storage facility[5]				

[4] These trips were copied directly from the TIS approved by the Town.

[5] Minimal peak hour trips generated by the Stack and Store are accounted for with growth rates. (ITE LUC 151: 2 total AM; 4 total PM trips). ITE data is included in Appendix II.

The background peak hour trips were distributed along the road network and assigned to the key intersections, as shown on Exhibit 6. The background trip distribution and assignment pattern, as shown in this report, was previously approved by Town of Bel Air and Harford County staff.

The detailed traffic data for each individual development is included in Appendix II. We then combined the base 2027 traffic volumes (Exhibit 4) with the background traffic volumes (Exhibit 6), to arrive at the total background traffic volumes, as shown on Exhibit 7.

FUTURE CONDITION

The future traffic condition establishes the total future traffic volumes at the key intersections. This condition includes the new site generated peak hour trips and the proposed site access scenario.

Access Configuration

As stated, and shown on the site plan, the mall access points will be reconfigured for the proposed project. The Harford Mall site has three existing access points along Boulton Street. As shown on the site plan, the existing access leg at the signalized Boulton Street @ East Mall Access/Retail Center intersection (Intersection #7) will be eliminated. This intersection would then become a three-way signalized intersection that will continue to serve the existing retail center.

A new unsignalized access is proposed to align with the existing right-in/right-out access at the retail center across from the mall (Intersection #8). The new access would be restricted to left-in/right-in/right-out movements.

Peak Hour Trip Adjustments

Due to the mall access modification, the peak hour traffic was adjusted as shown on exhibit 8. One-third of the inbound mall left turns from Boulton Street were assigned to the new unsignalized east mall access (intersection #8) and two-thirds of the inbound left turns were assigned to the signalized Gateway Drive/ mall access (intersection #5). Two-thirds of the outbound right-turn trips from the mall onto Boulton Street were assigned to the new unsignalized east mall access (intersection #8) and one-third of the right turn trips were assigned to the signalized Gateway Drive/ mall access (intersection #5). All remaining movements were shifted to the signalized Gateway Drive intersection.

Trip Generation

The *Institute of Transportation Engineers' (ITE), Trip Generation Manual, 11th Edition* was used to determine the site generated peak hour trips. The ITE data is included in Appendix IV.

Site Trips

The trip distribution and assignment patterns were reviewed and approved by Town and County officials. The site trip distribution and assignment pattern are shown on Exhibit 9. The diverted peak hour traffic (Exhibit 8) and new site trips (Exhibit 9) were added to the total background traffic volumes (Exhibit 7), to arrive at total future traffic volumes shown on Exhibit 10.

The Highway Capacity Manual (HCM) analysis results are shown on the following tables. The HCM analysis was conducted for the existing traffic volume (Exhibit 3), the total background traffic volumes (Exhibit 7), and total future traffic volume (Exhibit 10). The HCM reports are provided in Appendix I.

SITE ACCESS - INTERSECTION DESCRIPTION

The Boulton Street East Mall Access (Intersection #8) and the Boulton Street @ Gateway entrances to the mall are the primary entrances to the proposed parking garage that supports the planned 300-unit apartment building.

Boulton Street East Mall Access (Intersection #8) - The HCM analysis results find the new Boulton Street East Mall Access (Intersection #8) proposed with a left-in/right-in/right-out access would operate with acceptable "B" or better (future condition) levels of service. As stated, this access is proposed with a left-in/right-in/right-out access configuration.

The future analysis also determined the 95th percentile vehicle queue turning left from Boulton Street at the proposed left-in/right-in/right-out site access is 48 feet (approximately two vehicles) and can be served by the proposed 60 feet of dedicated left turn storage. Additionally, the future queue along northbound Boulton Street approaching MD 24 is projected to be 245 feet. The proposed site access is located approximately 385 feet from the stop bar at the signal. Therefore, the Boulton Street traffic would not queue past the proposed site access or block the proposed inbound left turn movement.

Boulton Street @ Gateway Drive/mall access (Intersection #5) – This intersection would operate at level of service "B" or better at the future build-out condition. The 95th percentile queue are adequate and are maintained within the storage bays.

Harford Mall Access Intersection

Tollgate Road West Mall Access (intersection #9) – Due to the location of this intersection, it is not considered a site access intersection. The intersection will operate with acceptable levels of service with the exception of the outbound movement from the mall onto Tollgate Road, during the PM peak hour. As shown on the following table, the left turn delay was identified under the background conditions and is a typical delay pattern that is associated with unsignalized intersections.

Intersection	BACKGROUND Delay (LOS)		FUTURE Delay (LOS)	
	AM	PM	AM	PM
Tollgate Rd @ West Mall Access - EB Left - WB Left - NB Approach - SB Approach	 8.0(A) 0.7(A) 10.9(B) 21.4(C)	 9.3(A) 1.0(A) 14.7(B) **57.5(F)**	 8.1(A) 0.7(A) 11.1(B) 22.8(C)	 9.4(A) 1.0(A) 15.0(C) **63.8(F)**

Due to the location of the proposed apartment building and garage, the subject project would not increase the outbound peak hour trips at the mall access onto Tollgate Road.

All pedestrian counts were conducted on September 20, 2022. The weather on that day was clear and warm. Due to the low peak hour pedestrian volume, we offer no comment.

CONCLUSIONS AND RECOMMENDATIONS

The Town of Bel Air Code § 165-118 Design Standards provide the minimum acceptable level of service standard in commercial districts that shall be “D”.

Intersection Level of Service Findings

With the exception of the Business US 1 at Tollgate Road intersection, the study results determined all off-site key intersections would continue to operate at acceptable “D” or better levels of service with the full build-out of the 300-unit apartment building.

Business US 1 at Tollgate Road: The HCM analysis determined this intersection would operate with a an “E” LOS during the PM peak hour during the background and future traffic conditions.

Mitigation: **The proposed mitigation is to create a left, through, and a shared through/right lane configuration along the westbound N. Tollgate Road approach to US 1.** As shown on the table, the improvement creates an acceptable level of service condition. In order to achieve the proper lane widths for two Tollgate Road through lanes, this improvement depicted on Exhibit 11 would require minor modifications to the Tollgate Road right turn splitter island. The HCM analysis reports with this improvement are included in Appendix I.

Queuing Analysis

With the exception of the Business US 1 @ Tollgate Road intersection, adequate left turn storage was found at all off site intersections. The proposed mitigation to construct a left, a through, and a shared through/right turn lane along the westbound N. Tollgate Road approach mitigates the eastbound and westbound left turn queues.

GENERAL NOTES

1. ALL TRAFFIC SIGNAL FOUNDATIONS SHALL BE INSTALLED AT THE FINAL SIDEWALK OR CURB GRADE FOR CLOSED SECTIONS, HIGHEST ROADWAY PROFILE GRADE FOR OPEN SECTIONS, TO MEET CLEARANCES AS SPECIFIED IN MD 816.03, MD 818.01, MD 818.02, MD 818.04. THE CONTRACTOR SHALL VERIFY ULTIMATE GRADES PRIOR TO THE INSTALLATION OF ALL SIGNAL EQUIPMENT.
2. THE CONTRACTOR SHALL VERIFY ALL UNDERGROUND UTILITIES PRIOR TO INSTALLING PROPOSED SIGNAL EQUIPMENT. IF ANY UTILITY CONFLICTS SHOULD ARISE THE CONTRACTOR SHALL CONTACT THE PROJECT ENGINEER.
3. VIDEO CAMERA LOCATION / ALIGNING SHALL BE COORDINATED WITH THE SHA ENGINEER.
4. THE CONTRACTOR SHALL CONTACT SHA TO SCHEDULE RETROFITTING OF THE CONTROLLER EQUIPMENT IN ORDER TO OPERATE VIDEO DETECTION EQUIPMENT.
5. THE CONTRACTOR SHALL VERIFY ALL PROPOSED POLE LOCATIONS PRIOR TO INSTALLATION.
6. ALL PROPOSED LUMINAIRES SHALL BE SUPPLIED WITH A PHOTOCELL.
7. THE CONTRACTOR SHALL BE RESPONSIBLE FOR TERMINATING ALL SIGNAL CABLES TO THE APPROPRIATE TERMINALS AND PROPERLY LABEL EACH CABLE.
8. PUSHBUTTONS ARE TO BE LOCATED SO THAT THEY CAN BE ACTIVATED BY A PERSON IN A WHEELCHAIR REACHING LESS THAN 18" FROM A 60" x 60" LEVEL LANDING AREA WITH A CROSS SLOPE OF LESS THAN OR EQUAL TO 2%.
9. THE 10' SEPARATION BETWEEN PUSHBUTTONS IS TO BE MEASURED FROM FACE OF PUSHBUTTON TO FACE OF PUSHBUTTON, NOT CENTER TO CENTER OF POLE.
10. PUSHBUTTON ARROWS ARE TO BE PARALLEL TO THE CROSSING FOR WHICH THEY ARE INTENDED.
11. LOCATION OF ACCESSIBLE PEDESTRIAN SIGNAL PUSHBUTTONS MUST MEET LOCATION REQUIREMENTS OF MUTCD SEC. 4E.08 AND 4E.10 AND FIG. 4E-3 AND 4E-4 OF THE NCHRP PUBLICATION, "ACCESSIBLE PEDESTRIAN SIGNALS: GUIDE TO BEST PRACTICE". IF NOT MET, THE CONTRACTOR IS TO STOP WORK ON PUSHBUTTON LOCATIONS UNTIL A DESIGN WAIVER IS OBTAINED, APPROVED BY THE DIRECTOR, OFFICE OF TRAFFIC AND SAFETY.
12. ALL SIDEWALK RAMPS SHALL BE INSTALLED AS PER STANDARDS MD 655.11 AND MD 655.12 AS SHOWN ON TSP-2.
13. ALL HANDHOLES SHALL BE INSTALLED AT FINAL GRADE.

Tom,

After discussing with Kevin and John, while our collective recollections don't align exactly with yours, we are okay with Traffic Concepts not including intersection #6 in the study.

This is with the caveat that if the study contemplates routing any of the new trips through the #6 ingress/egress point, some level of analysis will be required.

Mark,

Don't renumber the intersections, just note that #6 was not studied for this phase (Phase One) of the project.

regards,

Rowan

John - I have attached the Bel Air Village (apartment Distribution) for your review. Based on that approved Bel Air Village traffic distribution, I am not inclined to change the distribution for the Mall site that we recently modified.

Alex, I included you in this email since you approved the Bel Air Village Dist. Can you provide your thoughts or concurrence? We need to get this study moving forward.

Thank you,
